BACnet Peach Pit
Data Sheet

- Peach Pit: BACnet
- Target: Client, Server
- Supported Platforms: Windows, Linux, OS X

BACnet is a building automation and control network protocol for systems such as HVAC, power, and emergency detection. The protocol serves as a lingua franca for communication between control systems and the devices that run the building’s operational systems. Integrating a BACnet device into a network that already supports BACnet is easier and more robust than custom ad-hoc solutions, so competing manufacturers have incentive to support it.

Specifications

Specification	Title
ANSI/ASHRAE Standard 135-2012	A Data Communication Protocol for Building Automation and Control Networks

Use Cases

Services	Specification
Who-Is and I-Am	ANSI/ASHRAE Standard 135-2012
ReadProperty	ANSI/ASHRAE Standard 135-2012
WriteProperty	ANSI/ASHRAE Standard 135-2012
AtomicReadFile	ANSI/ASHRAE Standard 135-2012
AtomicWriteFile	ANSI/ASHRAE Standard 135-2012
