

How to Purchase — Peach API Security

Peach API Security

Peach API Security performs security testing of Web Services/APIs. Testing includes OWASP Top-10 and PCI 6.5 security checks as well as fuzz testing. Designed to integrate into modern development models such as Agile and continuous integration (CI) cycles. Integrations with CI systems enables Peach API Security the product to be run automatically during daily builds. Peach API Security is intended to be integrated into engineering groups with minimal alterations to existing developer workflows.

Peach API Security is distributed as both a virtual machine image (OVA) and Amazon machine image (AMI) on a per-instance basis. The installation process consists of creating an OVA/AMI and performing some initial configuration steps.

Purchasing Options

There are three methods for purchasing Peach API Security. The requirements of the customer dictate which purchase method should be used.

Direct from Peach Fuzzer

Purchasing Peach API Security directly from Peach Fuzzer is the primary purchasing vehicle for customers who intend to run a Peach API Security OVA on their own locally managed servers or cloud server provider of their choosing.

Customers purchasing through this method should reach out to a Peach Fuzzer sales representative at sales@peachfuzzer.com or to an [authorized reseller](#).

The following information is needed:

- Which version of Peach API Security is desired, Advanced vs Basic. For more detailed product and pricing information, please reach out to a sales representative or authorized reseller.
- The end user's basic information including name, organization, and email.

Upon receipt of the required user information and a signed purchase order, a license to the product will be created. The end user will receive an email with login instructions to the Peach Portal.

For full download instructions of Peach API Security for Direct customers, please see our [Direct Download Guide](#).

Amazon Web Services Marketplace

Amazon Web Services allows customers to purchase and deploy Peach API Security as an Amazon Machine Image (AMI) using AWS' infrastructure. All transactions occur directly through the AWS marketplace.

Customers using this method should first navigate to the [AWS Marketplace](#). Next, search for and subscribe to [Peach API Security](#).

The following information is needed:

- An AWS user account
- Which AWS Region the AMI should be created in

The deployment of AWS Marketplace purchases is handled directly by AWS. For full download instructions of Peach API Security for Direct customers, please see our [AWS Download Guide](#). Please refer to their [deployment documentation](#) for any deployment issues.
